

Modifying VPN Profile to Connect Via TCP versus UDP

Disconnect your VPN session before performing the steps in this procedure.

If not already open, open your Cisco Systems VPN Client. The StateOfIndiana profile should be highlighted. If it is not, highlight it and click Modify.

On the properties window, click the Transport tab.

On the Transport Tab, click the radio button next to IPsec over TCP, leave the port at 10000, and then click Save.
